LangGraph Case Study

Replit AI Coding Agent

Name: Sama Alharbi
University: Umm AlQura
Major: Computer Science

Date: 10 March 2026

INTRODUCTION

Replit is a cloud-based development platform.

Industry: Software & Technology
Replit allows developers to:
- Write code in the browser
- Run applications online
- Collaborate with other developers

Recently, Replit integrated AI agents to help users write and manage code.

PROBLEM

Developers often spend time on repetitive coding tasks.

Challenges include:

- Writing boilerplate code
- Debugging errors
- Searching documentation
- Managing multiple development steps

These tasks slow down productivity.

THE AI SOLUTION

Replit built an AI coding assistant using LangGraph.

The AI agent can:

- Understand user instructions
- Generate code
- Run programs
- Fix errors
- Suggest improvements

This helps developers build software faster.

AGENTIC ARCHITECTURE

Replit uses a multi-agent architecture:

Manager Agent
- **Oversees the workflow.**

Editor Agents
- **Perform coding tasks.**

Verifier Agent
- **Checks code quality and interacts with the user.**

This design improves reliability and allows collaboration between AI agents and the user.

BENEFITS

Benefits of Replit AI Agents:

- Faster software development
- Reduced manual coding
- Improved developer productivity
- Easier learning for beginners

AI agents can automate many parts of the development workflow.
